```

Between 1966 and 1969 he worked as a postdoctoral researcher at the Salk Institute for Biological Studies in La Jolla, California.

His academic advisor Colin Reese[3][4] had arranged for him to work with Leslie Orgel, who would turn his scientific career onto a different pathway.

Orgel introduced him to Francis Crick and Sydney Brenner, who worked in Cambridge. He became inclined to biological research.

Although Orgel wanted Sulston to remain with him, Sydney Brenner persuaded Sulston to return to Cambridge[when?] to work on the neurobiology of *Caenorhabditis elegans* at the Medical Research Council (MRC) Laboratory of Molecular Biology (LMB).

Sulston soon produced the complete map of the worm's neurons.

He continued work on its DNA and subsequently the whole genome sequencing. In 1998, the whole genome sequence was published in collaboration with the Genome Institute at Washington University in St. Louis,[23] [24] so that *C. elegans* became the first animal to have its complete genome sequenced.

## OUTPUT :-

**JHON SULSTON**  
1942 - 2018  
John Edward sulston

*He was British biologist and academic who won the Nobel Prize in Physiology or Medicine for his work on the cell lineage and genome of the worm *Caenorhabditis elegans* in 2002 with his colleague Sydney Brenner and Robert Horvitz at the MRC Laboratory of Molecular Biology [13] He was a leader in human genome research and Chair of the Institute for Science, Ethics and Innovation at the University of Manchester.*

he was a Nobel Prize Winner

The following are the Thesis of Aspects of oligoribonucleotide synthesis (1966):

**Details:**

**~ Awards:-**

-> W. Alden Spencer Award (1986) -> Darwin Medal (1996)[1] -> Beadle Award (2000)[2] -> Knight Bachelor (2001) -> Edinburgh Medal (2001) -> Physiological Society Annual Review Prize Lecture (2002) -> Nobel prize (2002) -> Gairdner Award (2002)

**Career:-**

Between 1966 and 1969 he worked as a postdoctoral researcher at the Salk Institute for Biological Studies in La Jolla, California. His academic advisor Colin Reese[3][4] had arranged for him to work with Leslie Orgel, who would turn his scientific career onto a different pathway. Orgel introduced him to Francis Crick and Sydney Brenner, who worked in Cambridge. He became inclined to biological research. Although Orgel wanted Sulston to remain with him, Sydney Brenner persuaded Sulston to return to Cambridge[when?] to work on the neurobiology of *Caenorhabditis elegans* at the Medical Research Council (MRC) Laboratory of Molecular Biology (LMB). Sulston soon produced the complete map of the worm's neurons. He continued work on its DNA and subsequently the whole genome sequencing. In 1998, the whole genome sequence was published in collaboration with the Genome Institute at Washington University in St. Louis,[23] [24] so that *C. elegans* became the first animal to have its complete genome sequenced.
